EDUCATION

Rajabhat Rajanagarindra University
Faculty of Management Science
Business Computer
2023 – Present

TECHNICAL SKILLS

Frontend

- HTML5 & CSS3
- JavaScript
- Responsive Design

Backend

- Node.js Express.js
- REST API JWT
- bcrypt Multer

Tools

- Git & GitHub
- VS Code
- Postman
- XAMPP

Database

- MySQL
- MariaDB

LANGUAGES

- Thai: Native
- English: Intermediate (Technical Reading)

PERSONAL STRENGTHS

- Problem Solving
- Teamwork
- Willing to learn new technology
- Attention to Detail
- Adaptability

ABOUT ME

Fourth-year Business Computer student at Rajabhat Rajanagarindra University, seeking a Web Developer co-op internship (Nov 19, 2026 – Feb 26, 2027). With 3+ years of part-time experience supporting POS operations and inventory management across a two-branch business, I have hands-on experience working with business data, preparing Excel sales reports, troubleshooting hardware, and supporting day-to-day operations. This experience has given me a practical understanding of how technology and data support real business workflows, which led me to pursue web development and strengthen my fundamentals in programming, databases, and system development.

WORK EXPERIENCE

Mar 2023 – Present Mae Aiad Pla Som Pad Riw Co., Ltd

- Support POS operations across 2 store branches, serving as a first point of contact for POS-related issues and coordinating with the vendor's support team when necessary.
- Analyze and organize sales data by exporting POS data and creating Excel reports covering approximately 3 months of sales by product category, including comparisons between 2 branches for the shop owner.
- Troubleshoot and maintain hardware independently, including computers, POS equipment, receipt printers, and barcode scanners, handling most hardware-related Install, configure, and test new equipment, helping ensure computers and store devices are ready for daily operations.
- Coordinate with the shop owner and colleagues to identify operational problems and provide practical solutions for day-to-day store operations.

PROJECT

Wat Nakhumothanamai Punyaram Website — Backend REST API

Solo Project · Aug 2026 – Present · Backend completed, frontend in design

Tech Stack: Node.js, Express.js, MySQL, JWT, bcrypt, Multer, Postman, Git/GitHub

- Interviewed temple staff to gather requirements and define the project scope, features, and data.
- Designed a 6-table MySQL database and built a REST API with 24 endpoints across 6 modules: authentication, temple information, monks, activities, news, and gallery.
- Implemented admin authentication using JWT and bcrypt, with write operations protected by authentication middleware.
- Implemented image uploads using Multer, including image-only validation, a 5 MB file-size limit, and unique file names.
- Added input validation, parameterized queries, and centralized error handling to improve API reliability and security.
